

OKIA: NEW DECORATIONS THANKS TO HD TECHNOLOGY

ELEGANT 3-DIMENSIONAL FLOWERS ARE THE OUTCOME OF INTERNATIONALLY RECOGNIZED HD TECHNOLOGY

The latest HD frame launched by Okia is an explosion of elegant 3-dimensional flowers running along the temples to create a natural and extremely realistic decoration.

Both temples of the frame comprise a series of exceptional sculpted orchids with petals so fine that they look real. Harmonious nuances of color complete the realistic effect of the decoration and add a touch of refined femininity.

This exceptional new frame is the outcome of constant research into the already internationally recognized HD technology. With this patented technology, textures and colors are given high definition that enhances depth and offers a new range of HD patterns and textures totally

unique. Nano HD Technology, the latest from OKIA, was also used to make the floral decorations: the traditional thickness of HD acetate was considerably reduced to achieve a more flexible, lighter and stronger product while maintaining the characteristics and versatility of acetate.
