Retina scan optical coherence tomography unit

New from Nidek Co., Ltd, is their retina scan Duo optical coherence tomography unit with a high definition OCT and fundus camera in one compact system.

The Retina Scan Duo is a combined OCT and fundus camera system that is a user friendly, versatile unit providing high definition images and value added features.

Nidek's 3-D auto tracking, auto shot, and user friendly interface allow rapid and easy image capturing. Once alignment is completed, both the OCT and colour fundus images

can be captured in a single shot. Standard and professional modes are selectable based on clinician preference, increasing the versatility of this unit.

For OCT imaging, up to 50 images can be averaged and the OCT sensitivity is selectable. These features result in high definition OCT images that present pathology in detail. A 12 x 9 mm wide area image centered on the macula can be captured.

A 9 x 9 mm normative database provides a colour-coded map indicating distribution range of the patient's macular thickness in a population of normal eyes.

Okia offers journey to outer space

The new 'Glitter Stars' collection launched by Okia meets the increasing interest towards outer planets and the universe through extraordinary HDA patterns that evoke a sparkling galaxy.

Combining different acetate layers and metallic colours with controlled geometry or random motifs, 'Glitter Stars' frames create the sensational effect of a sky full of shining stars. Thanks to CSB (Crazy Sparkling Beauty) technique, precious glitter decorations meet the acetate patterns producing a brilliant 3D outcome.

Coburn Technologies' new polish

Coburn Technologies have introduced their latest consumable product for retail and wholesale lens labs, the Pinnacle Lite polish.

Developed with advanced chemistry and premium ingredients, its unique formulation is unlike any optical polishing slurry on the market today. It is qualified for use on all conventional equipment, all non-mineral materials and all surfaces, providing unmatched features and premium performance.

Key features of the new polish include, sustained suspension, 'slick' feel, with lower impact on skin and equipment, polished surfaces exhibiting a noticeably brighter sheen, and superior coating adhesion for backside coated lenses. The polish produces top quality surfaces consistently and is long lasting.

The polish is available in one gallon jugs and five gallon buckets.
