

Nouvelle collection de lunettes FUR par OKIA 2012

26 octobre 2012

LET'S HAVE A LUXURIOUS AND MYSTERIOUS LOOK WITH THE NEW FUR COLLECTION BY OKIA!

The unconventional and innovative Fur Collection designed by OKIA is perfect for women who always want to distinguish themselves. Drawing inspiration from patterns and colours seen in the latest trends of apparel and accessories, this new eyewear line combines them with a particular fur effect. Models are available in natural tones such as light red, giving a pure natural look, or in the tone of light blue, showing a more modern and cool style. Colours are softly dosed along the temples creating an extremely elegant and delicate decorative motif.

Thanks to an original design and to the sensational results that can be achieved by means of the patented HDA® Technology, all details as well as the visual effect of fur are shown on the frame. Backed up by over thirty years' experience in the eyewear sector, OKIA offers extraordinary models made with their well-known innovative techniques that allow the realization of complicated patterns on acetate. Thanks to HDA® Technology and its many applications, indeed, even the most sophisticated detail can be exhibited with an extreme definition effect.

The perfect eyewear for a trendy and glamorous look, the Fur Collection is dedicated to women that love new ideas and new experiences. Blending elegance and modernity, it is the real must-have for the coming months, a proposal that catches the eye with its distinctive and contemporary style.
