

Shiny Mineral Collection By Okia

By FourPlus Media Content Author / May 14, 2014 / Fashion Updates, Global / No Comments

The new collection takes inspiration from the idea and the feeling of 'gold' sand – sand that glistens under the sun

All features of this natural element – lightness, softness and subtle tone – have been carefully transferred on the acetate base, resulting in a unique textured design.

The temples of the new frames exhibit refined wavy patterns, inspired by the quiet and peaceful atmosphere of a beach. Delicate shades of gold and pink – proposed in solid version or with a transparent effect – complete the harmonious graphics and give them a touch of elegance.

A stylish eye-wear piece that balances creativity and technology equally, the Shiny Mineral collection is offered with the company's trademark HDA Technology.
