

Okia Debuts Lace Style

Okia has introduced a new women's style inspired by a lace pattern executed in its patented HDA Technology. A traditional hallmark of items like wedding dresses or veils, lace has recently become one of the hottest fashion trends. Okia's lace style features the pattern spread from the endpiece to the temple, while gold metallic lines are realized through the BMT technique to enrich the pattern and create a subtle sense of luxury. www.okia.com
